Design And Analysis On Scramjet

The design for such a scramjet engine is carried out in this project considering only the inlet designs and the flow analysis is carried out in CFD. A two dimensional analysis is carried out in this project. GAMBIT is used to create a model. FLUENT is used to cover the flow analysis.

Design and Analysis on Scramjet Engine Inlet

Design And Analysis Of Scramjet Inlet Atulya Sethi Amity Institute of Aerospace Engineering, Amity University, Noida,India ABSTRACT:SCRAMJET or Supersonic Combustion Ramjet Engine is an air breathing engine, which has no rotating parts. It is similar to ramjet engine except the combustion chamber having supersonic flow and the

Design And Analysis Of Scramjet Inlet

As displayed in Fig. 1, a typical scramjet, which comprises of an inlet, isolator, combustor and nozzle, should be integrated with the airframe. Over the past few decades, the pursuit of hypersonic vehicles has led to some great achievements in the study of the scramjets and their components . . . , even though the airbreathing hypersonic propulsion technology is relatively immature.

The two design characteristics have been widely applied in the design of the scramjet nozzle. Going adopted the MOC method to design a scramjet nozzle and studied the influence of the nozzle flap/ramp on the aerodynamic performance. The two nozzle design methods are heuristic; based on them, many design methods are developed.

Axisymmetric SCRamjet Engine Design and Performance Analysis

Due to the nature of their design, scramjet operation is limited to near- hypersonic velocities. As they lack mechanical compressors, scramjets require the high kinetic energy of a hypersonic flow to compress the incoming air to operational conditions.

Scramjet - Wikipedia

2.0 FLOW STRUCTURE IN A SCRAMJET ISOLATOR The structure of the supersonic flow in confined ducts under the influence of a strong adverse pressure gradient is of interest in the design of scramjet isolators. As shown in the schematic of Fig. 2, the pressure gradient is imposed on the incoming supersonic flow in the form of shock waves.
