Exchange 2013 scenarios The Exchange Deployment Assistant is a web-based tool that asks you a few questions about your current environment and then generates a custom step-by-step checklist that will help you deploy Exchange Server in your on-premises organization. The Deployment Assistant is currently available in English only.

Exchange Deployment Assistant | Microsoft Docs

First of all, even if Exchange 2013 provides services arrays, to ensure high-availability, it does not provide any load balancing mechanism. This means a third party appliance is required to balance traffic amongst CAS Servers and services. These services can be load-balanced are the ones hosted by the CAS servers as well as SMTP.

Exchange 2013 deployment guide - HAProxy Technologies

Exchange 2013 has been designed for simplicity of scale, hardware utilization, and failure isolation. This has greatly simplified both the deployment process and the implementation of a load balancer. 6. Exchange 2013 Server Roles Exchange 2013 has been consolidated into two roles, these are: the Client Access Server role and the Mailbox Server role.

Load Balancing Microsoft Exchange 2013

The hardware requirements to deploy Exchange Server 2013 are similar to the current Exchange Server 2010 and the following key points can help you build a test lab. However, I recommend building your Exchange Server 2013 lab using the latest versions or at least most updated versions of Active Directory and Operating System.
