Extending the idea of signals to individual threads is easy for synchronously-generated signals—the handler is invoked on the thread that generated the synchronous signal.

However, if the process

DOS is an acronym for the computer's "Disk Operating System" program. It's the software program that (1) sets up and maintains the information storage and retrieval system on the floppy and hard disks, and (2) mediates all other hardware-software interactions. Your application program, not DOS, does most everything

History of the DOS API.

The original DOS API in
86-DOS and MS-DOS

1.0 was designed to be
functionally compatible
with CP/M. Files were
accessed using file
control blocks (FCBs).

The DOS API was
greatly extended in MS-
DOS 2.0 with several
Unix concepts,
including file access
