The Posterior Intrahepatic Approach in Liver Surgery ...

The posterior intrahepatic approach is also an excellent method of preparing for resection of the caudate lobe, when dissecting the confluence from Segment I and when opening the dorsal fissure. The main oncological indications for the posterior approach are Klatskin tumour, primary liver cancer and liver metastases.

fissural or posterior intrahepatic techniques. However, these techniques may injure transposed vessels or bile ducts from the right portal pedicle to the left. The purpose of this study was to describe the anatomical aspects of the posterior intrahepatic ligamentum venosum approach to the left portal pedicle.

The posterior intrahepatic approach to the left portal ...

extrafascial-intrahepatic approach after division of a substantial amount of the hepatic tissue⁹. In 1992 Launois and Jamieson proposed the posterior intrahepatic approach to the appropriate glissonian pedicle, through the dorsal fissure of the liver¹⁰.

Laparoscopic anatomic resection of S7 is challenging. Ome and colleagues described an intrahepatic approach to the S7 Glissonean pedicles from the dorsal side without dissection around the hepatic hilum, allowing safe exposure of the right hepatic vein in the same view. This approach is safe and offers advantages for later hepatectomy.
