Valuation Analysis In Pharmaceutical Licensing

Approaches to Valuation of Pharmaceutical Licensing Deals Pharmaceutical licensing deals rarely, if ever, involve a simple one time payment, but encompass multiple payments and royalties, and require long-term cooperation. Value is created as the potential new drug becomes more likely to reach the market and revenue becomes a less distant hope.

Pharma/Biotech Valuation Methodology “Standards” are only directional, at best. Examples of standards include values of drugs by phase, value splits to partners, probabilities of success, market share, R&D and sales force costs, upfronts, milestones, royalty rates.

Valuation and Deal Structuring

A variety of approaches have been developed to evaluate pharmaceutical assets, but two similar yet distinct methods are most commonly used. Venture capitalists and large investment firms typically employ net present value (NPV) calculations while pharmaceutical companies more commonly use risk-adjusted net present value calculations (rNPV).

Valuing Pharmaceutical Assets: When to Use NPV vs rNPV

) of 20 times at the end of 2015 but subsided to 17 times by the end of 2016. While this multiple is still high, it is in line with historical valuation levels and consistent with what one would expect if biopharma could continue to deliver on mid-single-digit sales growth while maintaining current margins (around 30 percent).

Biopharma valuations--onward and upward? | McKinsey

licensing-deal-model_ Drawing on past licensing deals in the biotech space, one can see a major shift in licensing deals strategy. Big pharma is placing large bets on early-stage assets that could potentially provide pharma with long-term growth. A major challenge that licensors and licensees face is valuation of such assets.
